

# Requirements for PreClear Service

Getting the most out of your Drivewyze PreClear bypass service

Keep your drivers happy and your ROI maximized by ensuring Drivewyze has your complete and up-to-date preclearance data for all vehicles subscribed to the service.

The following information is required for any vehicle to be eligible for an interstate bypass in the US:

- **USDOT Number**
- **Unit Number**
- **VIN**
- **License Plate**
- **License Plate Jurisdiction**

This information can be readily maintained within the Omnitrac's QTRACS portal. Web services and direct access to Drivewyze systems are also available if required.

**Missing or invalid information will result in a pull in.**

At some sites, additional information is required for a driver to receive a bypass:

- **State Identification Number**  
Some states require a state-specific vehicle identification number as well as USDOT number, for example Kentucky's KYU number. Ensure that this information is current for vehicles that drive in these states.
- **Permits**  
Certain states require permits to grant bypasses to drivers. For a full list of permits required to receive a bypass, please visit:  
[drivewyze.com/bypass-restrictions/](https://drivewyze.com/bypass-restrictions/)
- **Weight Requirements**  
Weight requirements are measured through WIM (weigh-in-motion) scales. Select sites require this weight information to grant a bypass to a driver.
